Education

Iowa State University — *Ames, Iowa*
PH.D - COMPUTER SCIENCE — *June 2021 (expected)*
GPA 3.83/4.00

M.N.M Jain Engineering College — *Chennai, India*
BACHELOR OF ENGINEERING - COMPUTER SCIENCE AND ENGINEERING — *May 2011*

Skills

Languages/Tools Java, Python, C++, C, Git, UNIX Shell
Areas of Proficiency Graph-Based & Randomized Algorithms, Data Structures

Experience

Iowa State University — *Ames, Iowa*
GRADUATE RESEARCHER — *July. 2017-present*

- Researching novel problems on how to maximally spread information in large social networks.
- Created an efficient probabilistic algorithm to spread information to targeted users while avoiding adversaries - Constrained Influence Maximization (CIM) problem
- Designed an algorithm that improved the information spread by 12% while running almost 100 times faster than the existing state of the art solution.
- Programmed the algorithms in C++ to achieve high practical performance on graphs with 1.6 million nodes and 30 million edges.

NP Compete Technologies — *Chennai, India*
TECHNICAL STAFF MEMBER — *Oct. 2011-Sept. 2014*

- Developed an Android SDK that enabled businesses to detect user actions and make dynamic UI changes to their existing mobile applications in real-time.
- Leveraged Aspect Oriented Programming to log user actions, modify UI elements allowing for A/B testing in live mobile applications.
- Designed and implemented a comprehensive testing strategy by writing module-level JUnit tests and defining product-level use case scenarios.
- Defined and created a novel Contact Management application that enabled users to easily access and manage their contacts across various social networks and platforms.
- Implemented a Flask web application to collect user's contact information via OAuth and store it in user's Dropbox.
- Technical lead of a team of 4 programmers, managing product features, software design choices, coding standards and continuous integration.
- Implemented a tool in python that processed and categorized emails using Naive Bayes Classification.
- Initiated a team-wide peer code review practice that contributed to accelerated development.

Iowa State University — *Ames, Iowa*
GRADUATE TEACHING ASSISTANT — *2016-present*

- Assisted in several courses including Big Data Algorithms, Design and Analysis of Algorithms, Programming in Java.
- Implemented probabilistic data structures such as Bloom Filters, Count Min Sketch and applied it to create Web Crawlers, Information Retrieval Systems which were used as a benchmark for student submissions.
- Created a framework using a combination of Python scripts and Java programs that automatically graded student programs.
- Gave lectures on selected topics in probabilistic algorithms to a graduate level course consisting of 50 students.

Publications and Awards

2018 **IEEE BigData,** "Influence Maximization in Social Networks With Non-Target Constraints" (18.9% acceptance) — *Seattle, U.S.A*
2018 **Atanasoff Award Winner,** In recognition of Academic, Research performance (1 of 193 graduate students) — *Ames, U.S.A*
